

Choose one colour to work with. Use the lid of the tube to pierce the top of the tube.

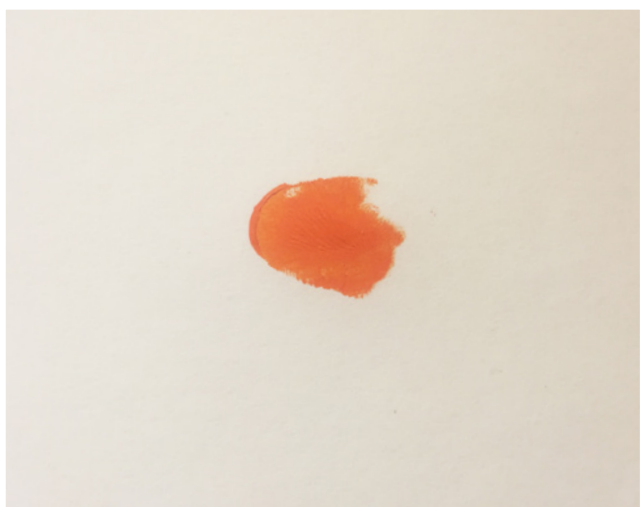

Squeeze a bean size amount into the paint tray and then smooth around with your thumb. Move your thumb into the next section of the tray to smooth off excess paint.

YOU WILL PRINT YOUR THUMB SIX TIMES!

Try this out on a scrap piece of paper first.

When you print your thumb, place your thumb gently in the centre of your prepared pieces, and then roll gently from one side to the other.

Your thumb print will look a little different every time. Print all six pieces of paper and leave to dry.
