

To make the horns we must carefully press the two differently coloured tentacles shapes together, be careful not to change their shape too much. Next we slowly and gently twist the tentacle evenly from top to bottom, this gives us a fun twist of the colours. After that make some small lengths to wrap around the base of the horns, this gives a more natural look!

Next up is his big foot! Firstly make a foot shape (without the toes, we'll add them next) and attach it to the base of your creature. Next roll some small balls of plasticine to become his toes and carefully press them to his foot. Repeat the same process but with his toe nails, and then flatten them on the tops of his toes!

And finally we can make the details! Roll some small balls and flatten them all over the top of his head, this will make up his scales. I felt that this little foot monster also needed a tail, so I rolled a very thin tentacle and attached it to his heel.

**There we have it!
One foot monster!**
